

OSFP224-1600GB-2XDR4-SM1-C

MSA and TAA 1.6T 2xDR4 PAM4 OSFP224 Transceiver (SMF, 1310nm, 500m, 2xMPO, DOM, CMIS 5.0)

Features:

- OSFP MSA Package
- Low EMI and Excellent ESD Protection
- Dual MPO-12 APC Optical Receptacle Connector
- 8x212Gbps PAM4 Electrical Interface
- Up to 500m Transmission on Single-Mode Fiber
- Power Consumption: 23W
- 3.3V Power Supply
- Hot-Pluggable
- Operating Temperature: 0 to 70 Celsius
- RoHS Compliant and Lead-Free

**Applications:**

- 16x100GBase Ethernet
- 2x800GBase Ethernet

Product Description

This MSA compliant OSFP224 transceiver provides 1600GBase-2xDR4 throughput up to 500m over single-mode fiber (SMF) PAM4 using a wavelength of 1310nm via a 2xMPO connector. It can operate at temperatures between 0 and 70C. All of our transceivers are built to comply with Multi-Source Agreement (MSA) standards and are uniquely serialized and tested for data-traffic and application to ensure seamless network integration. Additional product features include Digital Optical Monitoring (DOM) support which allows access to real-time operating parameters. This transceiver is Trade Agreements Act (TAA) compliant. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

ProLabs' transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. & 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S.-made or designated country end products.")

Absolute Maximum Ratings

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Storage Temperature	Tstg	-40		85	°C	
Operating Case Temperature	Tc	0		70	°C	
Operating Relative Humidity	RH	5		85	%	
Supply Voltage	Vcc	-0.5	3.3	3.6	V	
Receiver Damage Threshold Per Lane		5			dBm	
Data Rate Per Lane	DR	106.25 ± 50ppm			GBd	
Modulation Format		PAM4				

Electrical Characteristics

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Power Supply Voltage	Vcc	3.135	3.3	3.465	V	
Power Supply Current	Icc			7336	mA	
Power Dissipation	PD			23	W	
Transmitter						
Differential Pk-Pk Input Voltage	VIN,pp			1	V	
DC Common-Mode Voltage	Vcm	0		1	V	
Differential Termination Resistance Mismatch	Rdm	-10		10	%	
Receiver						
Differential Pk-Pk Input Voltage	VOUT,pp			1	V	
DC Common-Mode Voltage	Vcm	0		1	V	
Differential Termination Resistance Mismatch		-10		10	%	

Optical Characteristics

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Transmitter						
Center Wavelength	λ	1304.5	1311	1317.5	nm	
Average Launch Power Per Lane	Pavg	-3.3		4	dBm	
Optical Modulation Amplitude (OMA) Per Lane	OMA	-0.3		4.2	dBm	
Extinction Ratio	ER	3.5			dB	
Side-Mode Suppression Ratio	SMSR	30			dB	
Launch Power in OMA Minus TDECQ Per Lane		-1.2			dB	
Transmitter and Dispersion Eye Closure for PAM4 Per Lane	TDECQ			3.4	dB	
Optical Return Loss Tolerance				21.4	dB	
Transmitter Reflectance				-26	dB	
Average Launch Power of Off Transmitter Per Lane				-15	dBm	
Receiver						
Center Wavelength	λ_C	1304.5	1311	1317.5	nm	
Average Receiver Power Per Lane	PIN	-6.3		4	dBm	
Receiver Power Per Lane (OMA)				4.2	dBm	
Receiver Sensitivity (OMAouter) Per Lane	SEN			Max. (-3.4, TECQ-4.3)	dBm	1
Stressed Receiver Sensitivity (OMAouter) Per Lane Maximum				-0.9	dBm	
Receiver Reflectance				-26	dB	
LOS Assert	LOSA	-15			dBm	
LOS De-Assert	LOSD			-9	dBm	
LOS Hysteresis	LOSH	0.5		3	dB	

Notes:

1. Receiver sensitivity (OMAouter), per lane (maximum), is informative and defined for a transmitter with TECQ of 0.9dB. Receiver sensitivity (OMAouter) per lane for TECQ<0.9dB, maximum=3.4dBm. For 0.9dB≤TECQ≤SECQ, maximum=TECQ-4.3dBm.

Control and Status I/O Timing Characteristics

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
MgmtInitDuration	Max. MgmtInitDuration			2000	ms	1
ResetL Assert Time	t_reset_init	10			μs	2
IntL Assert Time	ton_IntL			200	ms	3
IntL De-Assert Time	toff_IntL			500	μs	4
Rx_LOS Assert Time	ton_los			100	ms	5
Flag Assert Time	ton_flag			200	ms	6
Mask Assert Time	ton_mask			100	ms	7
Mask De-Assert Time	toff_mask			100	ms	8

Notes:

1. Time from power on, hot plug, or rising edge of reset until completion of the MgmtInit State.
2. Minimum pulse time on the ResetL signal to initiate a module reset.
3. Time from occurrence of condition triggering IntL until Vout:IntL=Vol.
4. Time from clear on read operation of associated flag until Vout:IntL=Voh. This includes de-assert times for Rx_LOS, Tx_Fault, and other flag bits.
5. Time from Rx_LOS state to Rx_LOS bit is set (value=1b), and the IntL is asserted.
6. Time from occurrence of condition triggering flag to associated flag bit is set (value=1b), and the IntL is asserted.
7. Time from mask bit is set (value=1b) until the associated IntL assertion is inhibited.
8. Time from mask bit is cleared (value=0b) until the associated IntL operation resumes.

Surge Current Requirements

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Module Power Supply Voltage Including Ripple, Droop, and Noise Below 100kHz	Vcc_Module	3.135	3.3	3.465	V	
Host Power Supply Voltage Including Ripple, Droop, and Noise Below 100kHz	Vcc_Host	3.135	3.3	3.465	V	
Module Power Supply Noise Tolerance 10Hz to 10MHz (Peak-to-Peak) Voltage Drop Across Mated Connector (Vcc_Host – Vcc_Module)	Vcc_drop			66	mV	
Total Current for Vcc Pins	Icc_module			10	A	1
Host RMS Noise Output 10Hz to 10MHz	e_N_Host			25	mV	
Module RMS Noise Output 10Hz to 10MHz	e_N_Mod			15	mV	
Module In-Rush to Instantaneous Peak Duration	T_ip			50	μs	
Module In-Rush to Initialization Time	T_init			500	ms	
In-Rush and Discharge Current	I_didt			100	mA/μs	2
High-Power Mode to Low-Power Mode Transition Time From Assertion of M_LPWr or M_RSTn or ForceLowPwr	T_hplp			200	μs	

Notes:

1. Utilization of the maximum OSFP power rating requires thermal design and validation at the system level to ensure that the maximum connector temperature is not exceeded. A recommended design practice is to heatsink the host board power pin pads with multiple vias to a thick copper power plane for conductive cooling.
2. The specified in-rush and discharge current (I_didt) limit shall not be exceeded for all power transient events. This includes hot-plug, hot-unplug, power-up, power-down, initialization, low-power to high-power, and high-power to low-power.

Pin Descriptions

Pin	Logic	Symbol	Name/Description	Plug Sequence	Notes
1		GND	Module Ground.	1	1

59	CML-I	Tx1+	Transmitter Non-Inverted Data.	3	
60		GND	Module Ground.	1	1

Notes:

1. OSFP uses common ground (GND) for all signals and supply (power). All are common within the OSFP module, and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal common ground plane.
2. SCL and SDA are 2-wire serial interfaces between the host and the module using the I2C or I3C protocols. SCL is defined as the serial interface clock signal, and SDA is defined as the serial interface data signal. Both signals are open-drain and require pull-up resistors to +3.3V on the host. The pull-up resistor value shall be $1\text{k}\Omega$ to $4.7\text{k}\Omega$ depending on the capacitive load.
3. LPWn/PRSn is a dual-function signal that allows the host to signal low-power mode and allows the module to indicate that the module is present. The circuit shown in the "LPWn/PRSn Circuit" enables multi-level signaling to provide direct signal control in both directions. Low-power mode is an active-low signal on the host which gets converted to an active-low signal on the module. "Module Present" is controlled by a pull-down resistor on the module which gets converted to an active-low logic signal on the host.

Mechanical Specifications

Notes:

1. Tolerance: +/- 0.1MM.
2. Other according with OSFP MSA.
3. Light port according with fiber connector specifications.
4. Unit: mm.

About ProLabs

Our experience comes as standard; for over 15 years ProLabs has delivered optical connectivity solutions that give our customers freedom and choice through our ability to provide seamless interoperability. At the heart of our company is the ability to provide state-of-the-art optical transport and connectivity solutions that are compatible with over 90 optical switching and transport platforms.

Complete Portfolio of Network Solutions

ProLabs is focused on innovations in optical transport and connectivity. The combination of our knowledge of optics and networking equipment enables ProLabs to be your single source for optical transport and connectivity solutions from 100Mb to 400G while providing innovative solutions that increase network efficiency. We provide the optical connectivity expertise that is compatible with and enhances your switching and transport equipment.

Trusted Partner

Customer service is our number one value. ProLabs has invested in people, labs and manufacturing capacity to ensure that you get immediate answers to your questions and compatible product when needed. With Engineering and Manufacturing offices in the U.K. and U.S. augmented by field offices throughout the U.S., U.K. and Asia, ProLabs is able to be our customers best advocate 24 hours a day.
