### **Product Description**

This ADTRAN® SFP+ transceiver provides 10GBase-DWDM throughput up to 100km over single-mode fiber (SMF) using a wavelength of 1551.72nm via an LC connector. It is guaranteed to be 100% compatible with the equivalent ADTRAN® transceiver. This easy to install, hot swappable transceiver has been programmed, uniquely serialized and data-traffic and application tested to ensure that it will initialize and perform identically. Digital optical monitoring (DOM) support is also present to allow access to real-time operating parameters. This transceiver is Trade Agreements Act (TAA) compliant. We stand behind the quality of our products and proudly offer a limited lifetime warranty.

ProLabs' transceivers are RoHS compliant and lead-free.

TAA refers to the Trade Agreements Act (19 U.S.C. & 2501-2581), which is intended to foster fair and open international trade. TAA requires that the U.S. Government may acquire only "U.S. – made or designated country end products."

## **Notes:**

- 1. The module signal ground contacts, VeeR and VeeT, should be isolated from the module case.
- 2. This contact is an open collector/drain output and should be pulled up to the Host\_Vcc with resistor in the range  $4.7k\Omega$  to  $10k\Omega$ . Pull-ups can be connected to one or several power supplies; however, the hostboard design shall ensure that no module contract has voltage exceeding module VccT/R+0.5V.
- 3. Tx\_Disable is an input contact with a  $4.7k\Omega$  to  $10k\Omega$  pull-up resistor to VccT inside the module.
- 4. MOD\_ABS is connected to VeeT or VeeR in the SFP+ module. The host may pull the contract up to Host\_Vcc with a resistor in the range from  $4.7k\Omega$  to  $10k\Omega$ . MOD\_ABS is asserted "high" when the SFP+ module is physically absent from a host slot.
- 5. Internally pulled down per SFF-8431.
